## **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

Cambridge International Advanced Subsidiary and Advanced Level

## MARK SCHEME for the October/November 2015 series

## 9702 PHYSICS

9702/23

Paper 2 (AS Structured Questions), maximum raw mark 60

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE<sup>®</sup>, Cambridge International A and AS Level components and some Cambridge O Level components.

calculation of 
$$v$$
 (= 61.4) and use of  $E_{\rm K}$  (=  $\frac{1}{2}$   $mv^2$ ) =  $\frac{1}{2}$  × 0.27 × (61.4)<sup>2</sup> (C1)

$$\max E_k = 510 (509) J$$
 A1 [2]

(ii) velocity is proportional to time or velocity increases at a constant rate

(iii) use of 
$$v = at$$
 or  $v^2 = 2as$  or  $E = \frac{1}{2}mv^2$  to give  $v = 61(.4) \,\text{m s}^{-1}$  B1 [1]

resultant force is mg - R or resultant force decreases

(ii) at 
$$v = 40 \,\mathrm{m \, s^{-1}}$$
,  $R = 0.6 \,\mathrm{(N)}$ 

$$0.27 \times 9.8 - 0.6 = 0.27 \times a$$

$$a = 7.6 (7.58) \,\mathrm{m \, s^{-2}}$$
 A1 [2]

(iii) 
$$R$$
 = weight for terminal velocity

either weight requires velocity to be about 80 m s<sup>-1</sup> or at 60 m s<sup>-1</sup>, R is less than weight

4 (a) (i) reaction/vertical force = weight 
$$-P \cos 60^{\circ}$$

$$= 180 - 35 \cos 60^{\circ}$$

$$= 160 (163)N$$
 A1 [2]

(ii) work done = 
$$35 \sin 60^{\circ} \times 20$$
